

DB Manual

Railway system knowledge

CONTENTS

Contents

Foreword	11
<hr/>	
1	Basics
<hr/>	
1.1	Overview of the overall rail system
<hr/>	
1.1.1	Introduction
<hr/>	
1.1.2	Environmental aspects
<hr/>	
1.1.3	Structure of the rail system
<hr/>	
1.1.4	Rail operations
<hr/>	
1.1.5	The railway network
<hr/>	
1.1.6	Occupations in the integrated railway system
<hr/>	
1.2	Basic principles for construction and rail operations
<hr/>	
1.2.1	Railway law
<hr/>	
1.2.2	European directives and regulations
<hr/>	
1.2.3	Railway supervision and regulatory framework
<hr/>	
1.2.4	Technical specifications for interoperability
<hr/>	
1.2.5	Railway regulations
<hr/>	
1.2.6	Rail companies
<hr/>	
1.2.7	Associations
<hr/>	
1.2.8	Track access
<hr/>	
1.2.9	Operation of railway vehicles
<hr/>	
1.2.10	Train driver driving authorisation
<hr/>	
1.2.11	Planning and construction of railway infrastructure
<hr/>	
1.2.12	Barrier-free access to the rail system
<hr/>	
1.3	Development of the rail system in Germany
<hr/>	
1.3.1	The origins of the rail system
<hr/>	
1.3.2	Deutsche Reichsbahn
<hr/>	
1.3.3	Deutsche Bundesbahn (DB) and Deutsche Reichsbahn (DR)
<hr/>	
1.3.4	Rail Reform
<hr/>	
2	Railway vehicles
<hr/>	
2.1	Overview
<hr/>	

2.1.1	Classification and distinction	61
2.1.2	Standard vehicles	62
2.1.3	Special vehicles	63
2.1.4	Vehicle combinations	64
2.2	Vehicle technology	66
2.2.1	Vehicle superstructure	66
2.2.2	Coupling systems	67
2.2.3	Vehicle inscriptions	71
2.2.4	Traction technology	73
3	Traffic types	79
3.1	Freight transport	79
3.1.1	Introduction	79
3.1.2	Single wagonload transport	80
3.1.3	Block train transport	82
3.1.4	Networked railway	83
3.1.5	Multimodal transport	83
3.1.6	Works transport	85
3.1.7	Transport of dangerous goods	86
3.1.8	Freight wagons	87
3.2	Passenger transport	91
3.2.1	Train categories	91
3.2.2	Train concepts	92
3.2.3	High-speed traffic	95
3.2.4	Service design in passenger transport	99
3.2.5	Competition in regional and local rail passenger transport services	100
4	Railway infrastructure	101
4.1	Assets for rail operations	101
4.1.1	Introduction	101
4.1.2	Track structure	104
4.1.3	Points and crossings	112
4.1.4	Track stops	118
4.1.5	Track route elements	119

4.1.6	Marshalling yards	121
4.1.7	Building and underground constructions	123
4.1.8	Level crossings	126
4.1.9	Signal boxes	128
4.1.10	Signals	130
4.1.11	Turntables, transfer tables	135
4.2	Power supply systems	136
4.2.1	Introduction	136
4.2.2	Traction power	137
4.2.3	Contact line systems	140
4.2.4	Design and construction of the overhead contact line system	141
4.2.5	Direct current systems	143
4.3	Handling facilities	144
4.3.1	Definition	144
4.3.2	Refuelling facilities	144
4.3.3	Cleaning facilities	145
4.3.4	Supply and disposal facilities	147
4.4	Passenger transport facilities	149
4.4.1	Stations	149
4.4.2	Structural elements at passenger transport facilities	156
4.4.3	Interfaces to other modes of transport	160
4.5	Freight transport facilities	162
4.5.1	Introduction	162
4.5.2	Transshipment terminals	162
4.6	Miscellaneous transport facilities	165
4.6.1	Rail ferry terminals	165
5	Rail operations	167
5.1	Railway vehicle movements	167
5.1.1	Train sequence regulation and safeguarding	167
5.1.2	Operating regimes	172
5.1.3	Train movements	174
5.1.4	Shunting movements	178

5.1.5	Train formation	179
5.1.6	Emergency management	181
5.2	Planning rail operations	183
5.2.1	Operations planning	183
5.2.2	Train paths	184
5.2.3	Train path pricing system TPS 2001	185
5.2.4	Further development of the train path pricing system (TPS 2017)	188
5.2.5	Timetable and timetable planning	188
6	Maintenance	195
6.1	Introduction	195
6.1.1	Task definition and terms	195
6.2	Vehicle maintenance	196
6.2.1	Maintenance system	196
6.2.2	Depots and maintenance facilities	197
6.3	Track infrastructure maintenance	200
6.3.1	Task definition	200
6.3.2	Repair work	200
6.3.3	Track conversion	202
6.4	Accident prevention	203
6.4.1	Working in the track area	203
6.4.2	Protective clothing	204
6.4.3	Overhead contact line systems	205
7	Integrated rail system	207
7.1	Subsystems and mutual dependencies	207
7.1.1	Wheel-rail system	207
7.1.2	Technical framework of the track	210
7.1.3	Collection of current	214
7.1.4	High-speed systems	215
7.1.5	Environmental aspects	218

7.2	Railway brake technology	220
7.2.1	Technical fundamentals of brakes	220
7.2.2	Brake designs and modes of operation	221
7.2.3	Indirectly acting, automatic air brake	225
7.2.4	Mechanical brake components	227
7.2.5	Additional equipment and systems	228
7.2.6	Adjusting devices	229
7.2.7	Brake indicators	230
7.2.8	Brake inscription	231
7.2.9	Braked weight, braked weight percentage	232
7.2.10	Operating and checking brakes in rail operations	233
7.3	Loading freight wagons and load securing	235
7.3.1	Loading freight wagons	235
7.3.2	Load securing	236
7.4	Train protection technology	238
7.4.1	Introduction	238
7.4.2	Intermittent automatic train-running control (PZB)	239
7.4.3	Continuous automatic train-running control (LZB)	244
7.4.4	European Train Control System (ETCS)	245
7.4.5	Driver's safety device (DSD)	248
7.4.6	Train radio	249
7.5	System changeover	250
7.5.1	System boundaries	250
7.6	Vehicle dynamics	254
7.6.1	Introduction	254
7.6.2	Air drag and rolling resistance	254
7.6.3	Train movement sections	256
7.6.4	Tractive force	256
8	Further rail transport systems	257
8.1	Trams	257
8.1.1	Basic principles for construction and operations	257
8.1.2	Tram	258
8.1.3	Overhead and underground railway (U-Bahn)	259

8.1.4	Monorail (saddlebag monorail, suspension railway)	260
8.2	Track railways for overcoming large ascending grades	261
8.2.1	Introduction	261
8.2.2	Rack railway	261
8.2.3	Funicular railway	262
9	Further development of the rail system	263
9.1	Future trends	263
9.1.1	Influencing factors and developments	263
9.2	Transport development	265
9.2.1	Passenger transport	265
9.2.2	Freight transport	266
9.2.3	Development of the railway market	267
9.3	Further development of system components	267
9.3.1	Infrastructure	267
9.3.2	Rail operations	271
